

Tomato

Golden Sunrise

Fresh Tasty Vegetables

Add a splash of colour to your salads with these sweet tasting, yellow medium sized tomatoes.

Indoor Planting:

Sow seeds 1.5cm deep in pots or trays of moist compost, be careful not to over-water. Store in a warm location at an approx. temperature of 15-20°C (59-68°).

When the seedlings are approx. 6" high, transfer to larger pots. The plants can be moved to an unheated glasshouse in April or hardened off and planted out from June. Choose a sheltered position in full sun and transplant at a distance of 60cm (24") apart.

Support the plants when needed. Limit each plant to 4-5 trusses and pinch out the sideshoots.

Feed regularly with a tomato feed.

Sow April for transplanting outside and February – April for transplanting under glass.

February – April
